## CT REPORT: ABDOMEN / PELVIS -PLAIN

### CT UROGRAM

### [TWIN BEAM AND DUAL ENERGY]

#### TECHNIQUE:-

Multislice spiral CT volume scan of abdomen / pelvis were studied without IV contrast.

#### OBSERVATION: -

*There is evidence of left upper ureteric calculus (1.27cm with 1467HU) with obstructive uropathy and dilatation of pelvicalyceal system and proximal ureter.*

*Intra renal concretion seen on right side.*

*Right kidney is measuring 10.30 x 4.78cms and Left kidney is measuring 10.96 x 4.90cms*

Liver is normal in size, shape and CT density. No evidence of focal mass lesion or intra hepatic biliary radicles dilatation made out.

GB and extrahepatic biliary radicles appear normal.

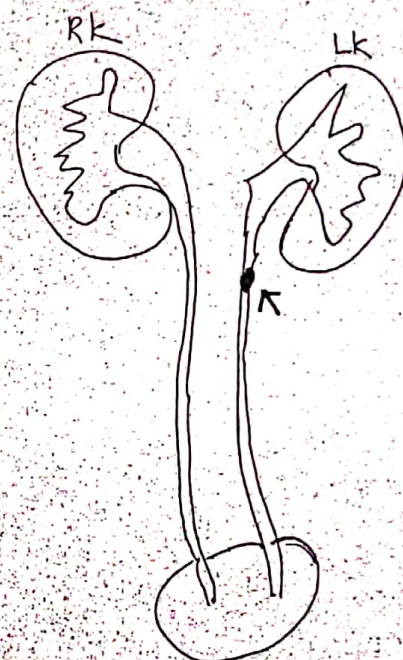

Spleen, Pancreas and Adrenals show normal size, shape and position. No evidence of focal mass lesion seen.

No evidence of lymphadenopathy or free fluid in peritoneal spaces.

Visualised sections of bowel loops and bony parts appear normal.

Bladder is partially opacified with urine. No evidence of intraluminal filling defect. The perivesicular fat planes are preserved. The rest of the pelvic organs appear normal.

**IMPRESSION:-** Possibility of left upper ureteric calculus with obstructive uropathy should be considered.

## ABDOMEN & PELVIS

LIVER: Liver appears normal in size and echotexture. No focal lesion seen. Portal vein appears normal in diameter. Intra hepatic and extra hepatic biliary passages are not dilated.

GALL BLADDER: GB is well distended with no evidence of calculus.  
Wall thickness appears normal.

SPLEEN AND PANCREAS: Spleen and pancreas appear normal.

FREE FLUID : There is no evidence of ascites or para aortic lymphadenopathy.  
There is no evidence of pleural effusion on both sides.

KIDNEYS : Right kidney measures 10.2 x 4.5 cms. It shows a tiny intra renal calculus of 4mm size in the middle calyces with no calyceal dilatation

Left kidney measures x cms. It shows mild pelvi calyceal dilatation due to a calculus in the PUJ / upper ureter measuring 11-12 mm. Two other intra renal calculi of 4mm each are seen in dilated calyces.

BLADDER: Urinary bladder is normal in contour. Wall thickness is normal.

PROSTATE: Prostate appears normal in size and echotexture.

RIF : There is no evidence of formed mass lesion or thickened appendix.

## IMPRESSION :

- ★ ULTRA SOUND OF ABDOMEN & PELVIS REVEALS
- ★ A CALCULUS IN THE LEFT PUJ / UPPER URETER MEASURING 11-12 MM WITH MILD UPSTREAM DILATATION. TWO OTHER INTRA RENAL CALCULI ARE ALSO SEEN IN DILATED CALYCES.
- ★ A TINY INTRA RENAL CALCULUS IN THE RIGHT KIDNEY WITH NO CALYCEAL DILATATION
